

3 Lines of Defense to Meet Your BC/DR Objectives

Be prepared for the unexpected! Don't let your business suffer the consequence of downtime and data loss.

No organization is immune to failures or outages, and when they occur, IT teams will be under enormous pressure to restore operations fast. For business continuity and disaster recovery (BC/DR) three best practices – **THREE LINES OF DEFENSE** – have proven successful time and again for mitigating or even fully avoiding the negative impact of storage failures on your business operations.

- 1**  **Easily circumvent storage failures and outages**
- 2**  **Enable recovery at a remote secondary/DR site**
- 3**  **Ensure point-in-time recovery of data from last-known good state**

“DataCore SANsymphony has made managing storage simple and provides extremely easy, 100% uptime, utilizing dual nodes.”

Ryan Tetzlaff
IT Manager, Open Systems International

Enhance your preparedness to address unexpected outages and disasters using **SANsymphony** Software-Defined Storage. All data services are delivered uniformly across diverse storage/server environments from various suppliers. Moreover, you can replace failing or aging storage hardware non-disruptively during normal business operations. With immediate effect you can leverage these three best practices in your existing storage infrastructure and ensure uninterrupted data access. Talk to our storage and BC/DR experts to learn more.
